Why Play It

- Play it to appreciate your creativity, thinking, imagination, intuition and insight.
- Super X Chess is a game based on ideas emerging through systemic space. Systemic space creates new emergent properties to the system from the relationships of its lower-level components. It's what makes everything - atoms, water, love, interactivity, games, life - possible. Systemic emergence can be speculated to be behind the existence of all matter and energy. If this is true, then you have a chance to experience and understand more about the secret sauce behind the reality, life and love by playing Super X Chess.
- Crafted with love, care and sacrifices. It will also mean content updates.

Balanced Design

- If you decide to combine your pieces, then you get a stronger piece but at the same time you lose time from developing your position.
- If your opponent can constantly threaten your more powerful pieces, then you're providing free tempo for the opponent.
- Having less pieces can also prove to be a drawback when fighting over a critical square as then you can't pile up as many attacks to it.

- Basic Game Modes: Super X Chess, Super960 Chess and Normal Chess.
- 64 chess variants with different kind of armies.
- Online multiplayer & local multiplayer.
- Single player mode against customizable AI opponent. There's AI difficulty levels ranging from estimated Elo of 700 to 2000.
- 3D and 2D views. Has a 3D view where it's easier to think chess moves than on competing products. Also the 2d view looks great!
- Tutorial for the new rules and for normal chess. If you're a beginner player, then it's recommended to start from the normal chess tutorial.
- Ability to go through your previously played games.
